SUPPLEMENT TO REPORT NO.

25X1

THIS DOCUMENT CONTAINS INFORMATION AFFECTING THE NATIONAL DEFENSE OF THE UNITED STATES, WITHIN THE MEANING OF TITLE 18, SECTIONS 793 AND 794, OF THE U. S. CODE, AS AMENDED. ITS TRANSMISSION OR REVELATION OF ITS CONTENTS TO OR RECEIPT BY AN UNAUTHORIZED PERSON IS PROHIBITED BY LAW. THE REPRODUCTION OF THIS FORM IS PROHIBITED.

THIS IS UNEVALUATED INFORMATION

25X1

Representatives of all plants in East Germany producing gasoline and diesel fuel took part in a meeting at the Leuna Werke on 27 August 1953 under the chairmanship of Dr. [redacted] technical director of Leuna. The purpose of the meeting was to establish common standards for the manufacture of gasoline (Vergaserkraftstoff) and Diesel fuel (Dieselkraftstoff), to be effective in all plants after 1 January 1954.

25X1

2. Ester told the meeting that the proposals for a standard from east German producing plants had been studied. (This fell under East German State Planning Commission Plan Task [redacted]). He emphasized that the purpose of standardization was to make East German gasoline and Diesel [redacted] standards for good [redacted] Ester added

25X1

3. Ester stated that he realized the difference [redacted] and what the producing plants were able to deliver. He said the factories [redacted] tion, even if [redacted] had risen so [redacted] longer any reason to produce, at a loss, distilled gasoline (Schwelbenzin). Using the new process, gasoline could be produced by hydrogenation in the necessary quantity with the necessary odor (Geruch) and storage properties. The new proposals for gasoline contained higher requirements than the specifications in the Halle Protocol; these requirements had been accepted by the consumer representatives and the offices concerned with the development of engines. The factories which were to consider the new formula were requested not to view it from the point of view of current production, but rather with the thought in mind of future potential ability.

4. Ester proposed that, in order to produce complete [redacted] for Diesel motor [redacted] manufactured, as [redacted]

3. Transportation and Storage:

Transportation and storage barrels must be clean to hold

[REDACTED]

4.0 test discharge

according to

Industrial Norms

4.1 density (2.2)

4.2 boiling curve (2.3)

4.3 solid residue (2.4)

4.5 acid content (2.6)

4.6 active sulphur (2.7)

4.7 storage qualities (2.8)

4.8 octane rating (2.9)

25X1

B. Standard specifications for fuel for quick-running Diesel motors, according to State Planning Commission Project

25X1

1. Product concerned: all fuels produced in East Germany for quick-running Diesel motors.2. Minimum quality:

2.1 [REDACTED]

[REDACTED]ely translucent, free
mechanical impurities.

2.2 density at 20°C.

between 0.800 and 0.900 g/m

2.3 boiling curve
up to 250°C.

under 65%

up to 350°C.

minimum 80%

2.4 flash point (Abel-Pensky)

minimum 55°C.

2.5 tendency to coke 2/
(Conradson test)

maximum 0.1%

2.6 neutralization number

maximum 0.2 mgr/gr

2.7 sulphur content

under 0.5%

2.8 corrosion (zinc strips)

weight loss under 4 mgr/m²
per day

2.9 hard asphalt content

2.9 hard asphalt content

PAGE 4

2.10 water content

maximum 0.5%

25X1

2.11 ash content

maximum 0.0%

2.12 beginning of
precipitation

in winter

under minus 8°C

2.13 freezing point (Stockpunkt)

in summer

not over 0°C

in winter

not over -15°C

2.14 viscosity (Engler degrees)
at 20°C

1.2 to 2.0 E/20°C.

2.15 determination of tendency
to sparkafter the spark distortion
pr. (Quendverzugs-Verfahren)
in motors-minimum 40 Ca-Z.

1/ Values are in effect from the time the product leaves the plant until final delivery.

2/ For preparation of the standard extremely important.

3. Transportation and Storage: Containers must be clean. Zinc-plated containers should be avoided. Products procured from tar distillation must be so labeled and cannot be mixed with Diesel fuels made from other materials; they must be stored separately. 1/ 25X1

4. Laboratory Test Standards:

4.0 Test discharge

4.1 Density (2.2)

4.2 Boiling curve (2.3)

4.3 Flash point (2.4)

4.4 Tendency to chke (2.5)

4.5 Neutralization number (2.6)

4.6 Sulphur content (2.7)

4.7 Corrosion (zinc strips) (2.8)

1/ The main problem is the necessity of avoiding zinc. East Germany's total of tank cars, the division of tank cars into gasoline and Diesel. Reichsbahn Kesselwagenle has about 1,800 tank cars at its disposal. Of these, it is presumed for 1 January about 60 percent will be set aside for gasoline only; the remainder will be used solely for Diesel. The problem will probably arise that in a given month, production of gasoline will drop while that of Diesel fuel rises; given such a case, what will the East German transportation system do in order to keep the liquid fuels moving? A tank car can be cleaned once, but it cannot be continually switched back and forth from carrying gasoline to Diesel fuel and vice-versa.

4.10 Freezing point (2.13)

4.11 Determination of tendency to spark (2.15)

25X1

C. Standard specifications for fuel for all other Diesel motors:

1. Product concerned: all fuels produced in Germany for Diesel motors other than those concerned under [redacted] above.

2. Minimum quality:

2.1 appearance 1/

Light to dark, free of mechanical impurities

2.2 density at 20°C

Between 0.800 and 0.900 g/ml

2.3 Boiling curve up to 350°C

Minimum 80%

2.4 flash point (Ab [redacted])

Minimum 55°C

2.5 tendency to coke (maximum) Conradson test

0.2%

2.6 Neutralization number

Maximum 0.2 mgr/gr

2.7 Sulphur content

under 2%

2.8 Hard asphalt content

Maximum 0.03%

2.9 Water content

Maximum 0.5%

2.10 Ash content

Maximum 0.05%

2.11 Beginning of paraffin precipitation (BPA point) in winter

not over -5°C

2.12 Freezing point in summer

not over 0°C

in winter

not over -10°C

2.13 Viscosity in Engler degrees

1.2 to 2.0 E/20°C

2.14 Determination of tendency to spark 2/

after the spark distortion process in Diesel motors, minimum 40 CaeZ

1/ Values are in effect from the time the product leaves the plant until final delivery.

2/ For preparation of the standard fuel [redacted] extremely important.
